Case Study

14. Continuous Integration with Simple Code Analysis

- **Concepts Used**: Jenkins, AWS Cloud9, and SonarQube.
- **Problem Statement**: "Set up a Jenkins pipeline using AWS Cloud9 to perform a simple code analysis on a JavaScript file using SonarQube."
- **Tasks**:
    - Create a Jenkins job using AWS Cloud9.
    - Configure the job to integrate with SonarQube for basic code analysis.
    - Run the Jenkins job with a JavaScript file and review the analysis report.

---

1. Introduction

Case Study Overview : This case study is about **Continuous integration (CI)** of pipeline using **Jenkins** and **SonarQube** on **AWS Cloud9**. This setup is used to ensure that analysis of code (Here JavaScript) is automated during the development stage.

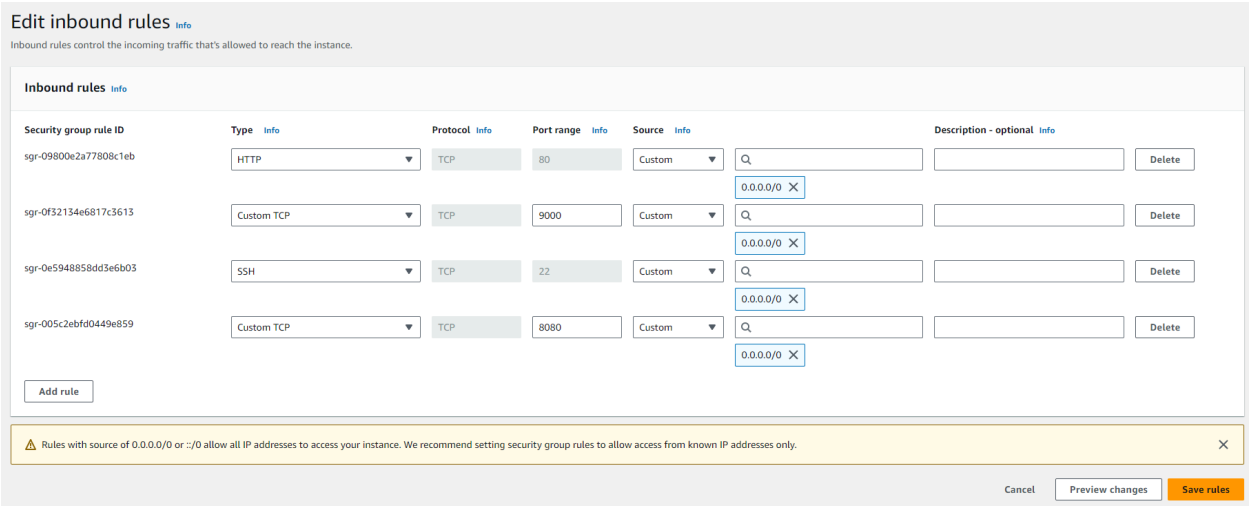
Here we have used an **EC2** instance because AWS has stopped giving access to new users from **25th July 2024**. Along with this we have used **GitHub** for code storage and version control.

This Key Feature and Application : The main feature of this case study is to automate the build process with Jenkins combined with SonarQube for analysis. When a new commit is initiated on Github it triggers the Build Now process on Jenkins.

2. Step-by-Step Explanation

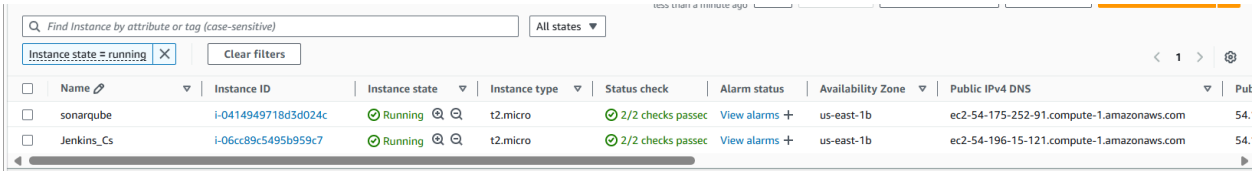
Allow the following inbound rules on EC2 instance of Jenkins and SonarQube:

- **HTTP (port 80)**: For accessing Jenkins and SonarQube.
- **SSH (port 22)**: For secure shell access and SonarQube.
- **Custom TCP (port 8080)**: For accessing Jenkins.
- **Custom TCP (port 9000)**: For accessing sonarqube.



Step 1: Initial Setup and Configuration

1. Launch a **t2.medium** EC2 instance with **Ubuntu.**
2. SSH into the instance using a terminal with the command



Step 2: Install Jenkins on EC2 (Ubuntu)

- `ssh -i path/to/your-key.pem ubuntu@<your-EC2-IP>`
- `sudo apt update`

```
ubuntu@ip-172-31-29-196:~$ sudo apt update

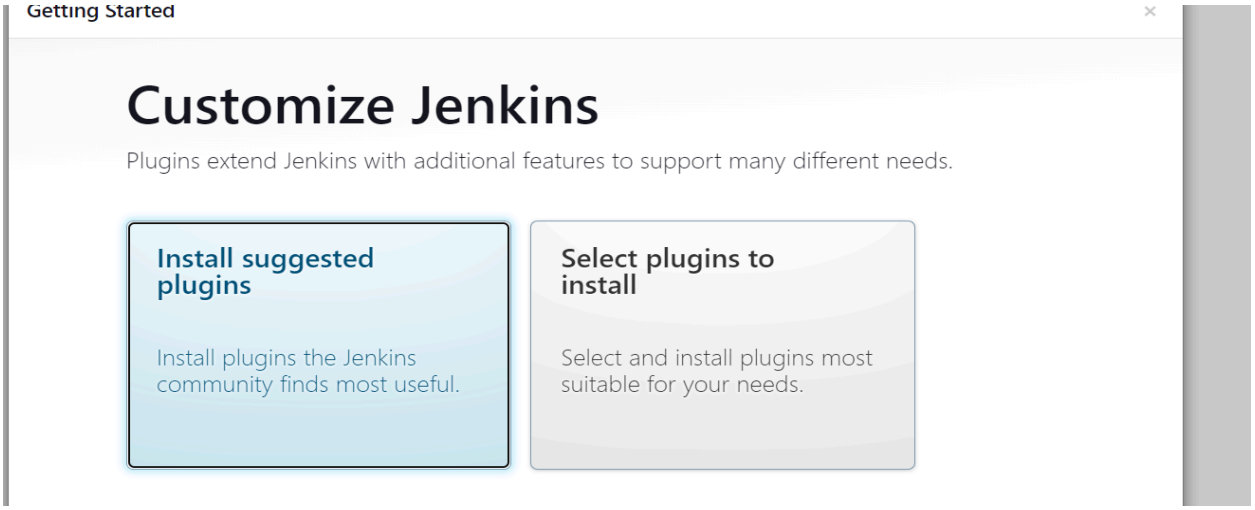
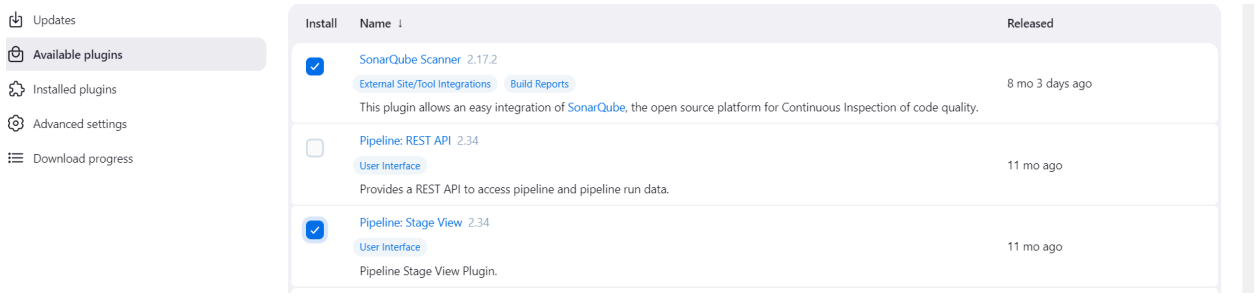
Open a browser and navigate to *http://<your-EC2-Public-IP>:8080*.

 # To get Administrator Password

- `sudo cat /var/lib/jenkins/secrets/initialAdminPassword`



1. **Install SonarQube Scanner Plugin in Jenkins**:
   - Go to **Manage Jenkins** → **Manage Plugins**.
   - Search for **SonarQube Scanner** and install it.



Step 3: Install Sonarqube in new EC2 (Ubuntu)

1. Prepare your Ubuntu server.

```
sudo apt update

sudo apt upgrade -y
```

2. Install OpenJDK 11 - install java development kit 11 or higher version as now

- `sudo apt install -y openjdk-11-jdk`

3. Install and Configure PostgreSQL

- `sudo sh -c 'echo "deb http://apt.postgresql.org/pub/repos/apt/ `lsb_release -cs`-pgdg main" >> /etc/apt/sources.list.d/pgdg.list'`

```
ubuntu@ip-172-31-92-10:~$ sudo sh -c 'echo "deb http://apt.postgresql.org/pub/repos/apt/ `lsb_release -cs`-pgdg main" >> /etc/apt/sources.list.d/pgdg.lis
ubuntu@ip-172-31-92-10:~$
```

Add PostgreSQL signing key.

- `wget -q https://www.postgresql.org/media/keys/ACCC4CF8.asc -O - | sudo apt-key add -`

```
ubuntu@ip-172-31-92-10:~$ wget -q https://www.postgresql.org/media/keys/ACCC4CF8.asc -O - | sudo apt-key add -
Warning: apt-key is deprecated. Manage keyring files in trusted.gpg.d instead (see apt-key(8)).
OK
ubuntu@ip-172-31-92-10:~$
```

Install PostgreSQL.

- `sudo apt install -y postgresql postgresql-contrib`

```
ubuntu@ip-172-31-92-10:~$ sudo apt install -y postgresql postgresql-contrib
sudo systemctl enable postgresql
sudo systemctl start postgresql
sudo passwd postgres
su - postgres
createuser sonar

Preconfiguring packages ...
```

Enable DB server to start automatically on reboot.

- `sudo systemctl enable postgresql`

Start DB server.

- `sudo systemctl start postgresql`

Change the default PostgreSQL password.

- `sudo passwd postgres`

Switch to the postgres user.

- `su - postgres`

Create a user named sonar.

- `createuser sonar`

Log into PostgreSQL.

- `psql`
- `ALTER USER sonar WITH ENCRYPTED password '<your_password>';`
- `CREATE DATABASE sonarqube OWNER sonar;`
- `GRANT ALL PRIVILEGES ON DATABASE sonarqube to sonar;`

Exit PostgreSQL.

- `\q`

```
No VM guests are running outdated hypervisor (qemu) binaries on this host.
Synchronizing state of postgresql.service with SysV service script with /usr/lib/systemd/systemd-sysv-install.
Executing: /usr/lib/systemd/systemd-sysv-install enable postgresql
New password:
Retype new password:
passwd: password updated successfully
Password:
postgres@ip-172-31-92-10:~$ psql
ALTER USER sonar WITH ENCRYPTED PASSWORD 'my_strong_password';
CREATE DATABASE sonarqube OWNER sonar;
GRANT ALL PRIVILEGES ON DATABASE sonarqube TO sonar;
\q
exit
psql (16.4 (Ubuntu 16.4-0ubuntu0.24.04.2))
Type "help" for help.

postgres=#
```

Return to your non-root sudo user account.

- `exit`

4. Download and Install SonarQube

Install the zip utility, which is needed to unzip the SonarQube files.

- `sudo apt install -y zip`

Locate the latest download URL from SonarQube official download page. At the time of writing this document, the download URL was as follows:

https://binaries.sonarsource.com/Distribution/sonarqube/sonarqube-9.0.1.46107.zip

Download the SonarQube distribution files.

- `sudo wget https://binaries.sonarsource.com/Distribution/sonarqube/sonarqube-9.0.1.46107.zip`

Unzip the downloaded file.

- `sudo unzip sonarqube-9.0.1.46107.zip`

Move the unzipped files to /opt/sonarqube directory

- `sudo mv sonarqube-9.0.1.46107 /opt/sonarqube`

```
ubuntu@ip-172-31-92-10:~$ sudo apt install -y zip
sudo wget https://binaries.sonarsource.com/Distribution/sonarqube/sonarqube-9.0.1.46107.zip
sudo unzip sonarqube-9.0.1.46107.zip
sudo mv sonarqube-9.0.1.46107 /opt/sonarqube

5. Add SonarQube Group and User

Create a sonar group.

- `sudo groupadd sonar`
- `sudo useradd -d /opt/sonarqube -g sonar sonar`
- `sudo chown sonar:sonar /opt/sonarqube -R`

```
ubuntu@ip-172-31-92-10:~$ sudo groupadd sonar
sudo useradd -d /opt/sonarqube -g sonar sonar
sudo chown sonar:sonar /opt/sonarqube -R
ubuntu@ip-172-31-92-10:~$
```

6. Configure SonarQube

Edit the SonarQube configuration file.

- `sudo nano /opt/sonarqube/conf/sonar.properties`

```
  GNU nano 7.2                                  /opt/sonarqube/conf/sonar.properties
# Property values can:
# - be overridden by environment variables. The name of the corresponding environment variable is the
#   upper-cased name of the property where all the dot ('.') and dash ('-') characters are replaced by
#   underscores ('_'). For example, to override 'sonar.web.systemPasscode' use 'SONAR_WEB_SYSTEMPASSCODE'.
# - be encrypted. See https://redirect.sonarsource.com/doc/settings-encryption.html

#--------------------------------------------------------------------------------------------------
# DATABASE
#
# IMPORTANT:
# - The embedded H2 database is used by default. It is recommended for tests but not for
#   production use. Supported databases are Oracle, PostgreSQL and Microsoft SQLServer.
# - Changes to database connection URL (sonar.jdbc.url) can affect SonarSource licensed products.

# User credentials.
# Permissions to create tables, indices and triggers must be granted to JDBC user.
# The schema must be created first.
#sonar.jdbc.username=
#sonar.jdbc.password=

#----- Embedded Database (default)
# H2 embedded database server listening port, defaults to 9092
#sonar.embeddedDatabase.port=9092

#----- Oracle 12c/18c/19c
# The Oracle JDBC driver must be copied into the directory extensions/jdbc-driver/oracle/.
# Only the thin client is supported, and we recommend using the latest Oracle JDBC driver. See
# https://jira.sonarsource.com/browse/SONAR-9758 for more details.
# If you need to set the schema, please refer to http://jira.sonarsource.com/browse/SONAR-5000
#sonar.jdbc.url=jdbc:oracle:thin:@localhost:1521/XE

#----- PostgreSQL 9.6 or greater

^G Help          ^O Write Out     ^W Where Is      ^K Cut           ^T Execute       ^C Location      M-U Undo         M-A Set Mark     M-] To Bracket   M-Q Previ
^X Exit          ^R Read File     ^\ Replace       ^U Paste         ^J Justify       ^/ Go To Line    M-E Redo         M-6 Copy         ^Q Where Was     M-W Next
```

Step 1: Find the following lines.

#sonar.jdbc.username=

#sonar.jdbc.password=

Step 2: Uncomment the lines, and add the database user sonar and password my_strong_password you created in Section 3.

- `sonar.jdbc.username=sonar`
- `sonar.jdbc.password=my_strong_password`

Step 3: Below those two lines, add sonar.jdbc.url.

- `sonar.jdbc.url=jdbc:postgresql://localhost:5432/sonarqube`

Save and exit the file.

Edit the sonar script file.

- `sudo nano /opt/sonarqube/bin/linux-x86-64/sonar.sh`

locate this line. **#RUN_AS_USER=** Uncomment the line and change it to.

- `RUN_AS_USER=sonar` **Save and exit the file.**

7. Setup Systemd Service

- `sudo nano /etc/systemd/system/sonar.service`

Step 1: Paste the following lines to the file.

[Unit]

Description=SonarQube service

After=syslog.target network.target

[Service]

Type=forking

ExecStart=/opt/sonarqube/bin/linux-x86-64/sonar.sh start

ExecStop=/opt/sonarqube/bin/linux-x86-64/sonar.sh stop

User=sonar

Group=sonar

Restart=always

LimitNOFILE=65536

LimitNPROC=4096

[Install]

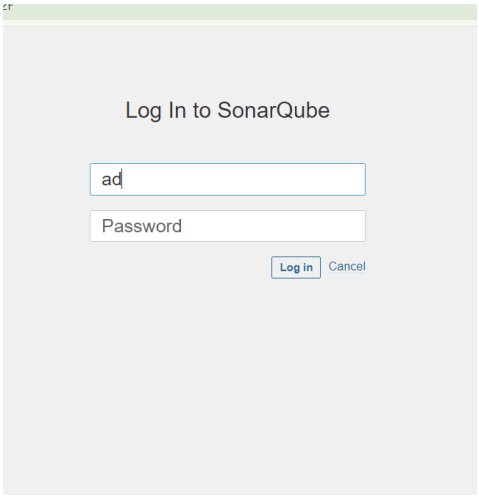
WantedBy=multi-user.target

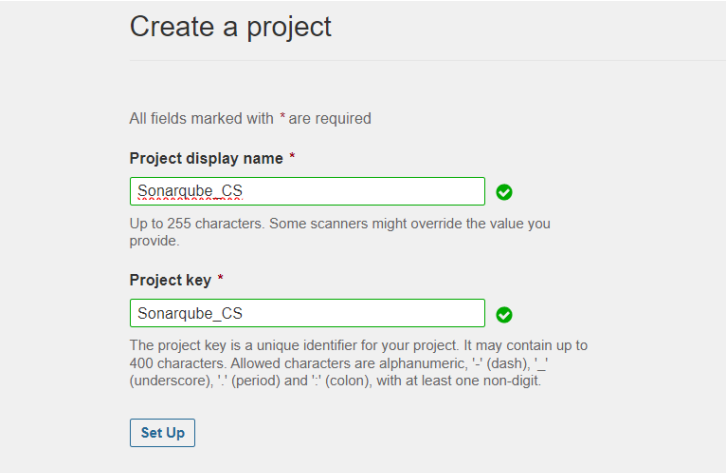
Save and exit the file.

Start SonarQube

- `sudo systemctl enable sonar`
- `sudo systemctl start sonar`
- `sudo systemctl status sonar`

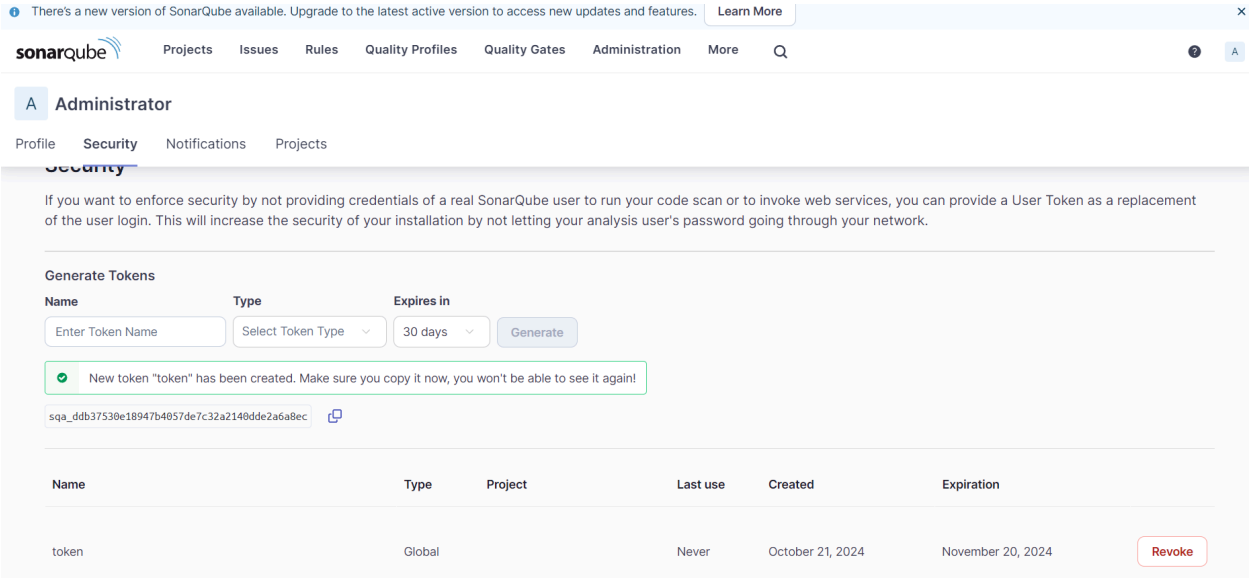
Open a browser and navigate to *http://<your-new-EC2-Public-IP>:9000*.





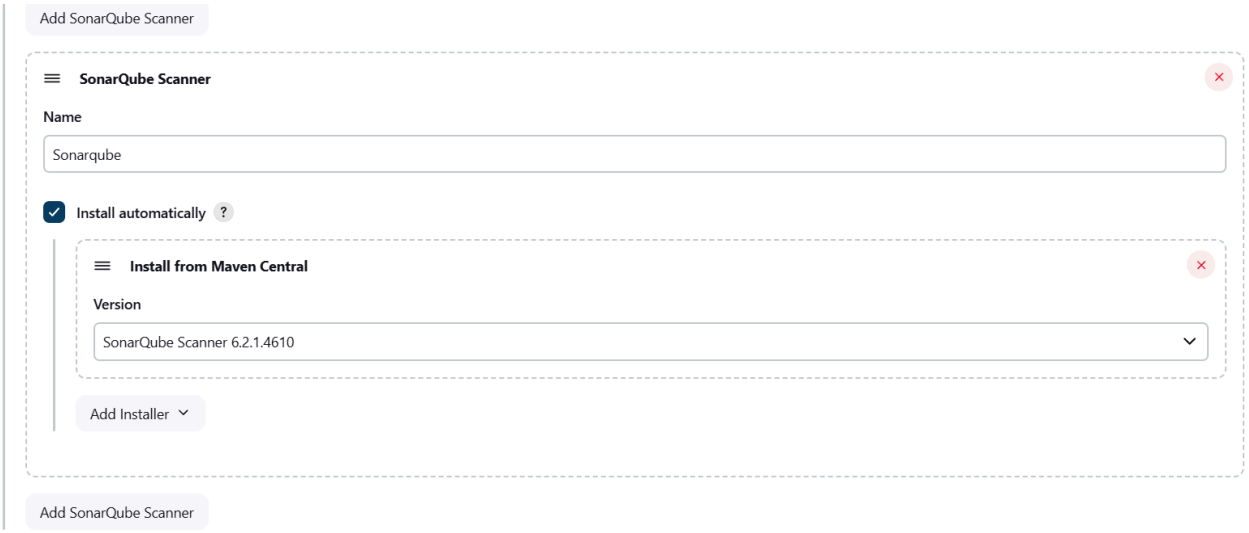
Step 4: Integrate Jenkins with SonarQube

1. **Generate authentication token**: Generate a token in SonarQube by going to **My Account → Security → Generate Tokens**.

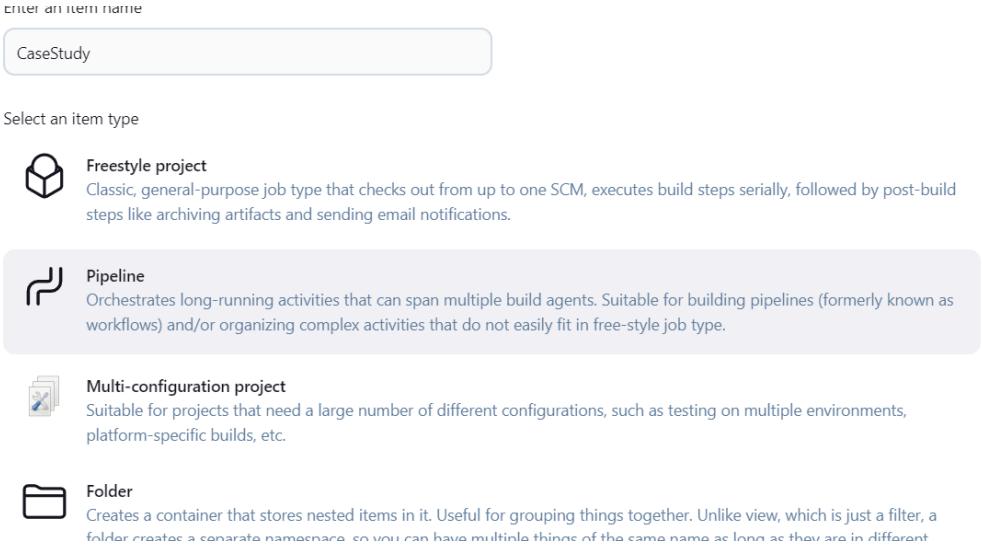


2. **<u>Add Credentials in jenkins</u>:**
    a) Go to **Manage Jenkins → Manage Credentials → Add a new credential**.
    b) Add your SonarQube token as a **Secret Text** credential.
3. **<u>Configure SonarQube Server in Jenkins</u>**:
    a) Go to **Manage Jenkins → Configure System**.
    b) Find the **SonarQube servers** section and click **Add SonarQube**.
    c) Enter:
        - **Name**: SonarQube **or** <any name>
        - **Server URL**: *http://<your-new-EC2-Public-IP>:9000* .
        - **Server authentication token**: Use generated token.

4. **Set sonarqube Scanner installer**
    Manage Jenkins → Tools → SonarQube Scanner → Add Installer



Step 5: Create Pipeline project



For Continuous Integration:

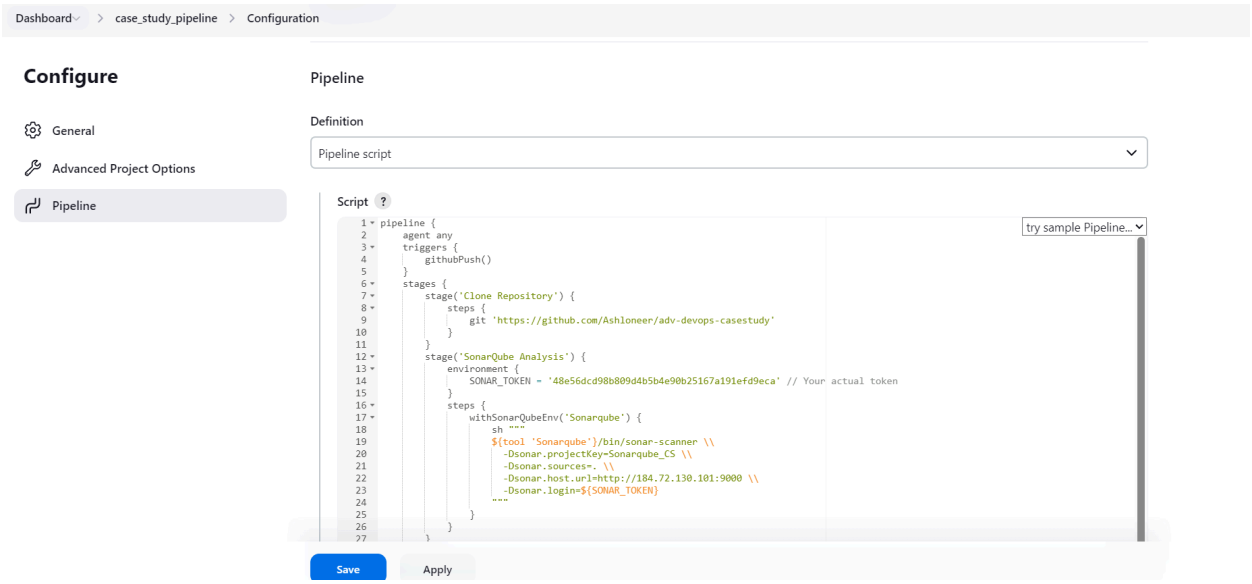
1) **Configure GitHub Webhook:**
   a) Go to your GitHub repository. → Navigate to **Settings** > **Webhooks** → Click **Add webhook**.

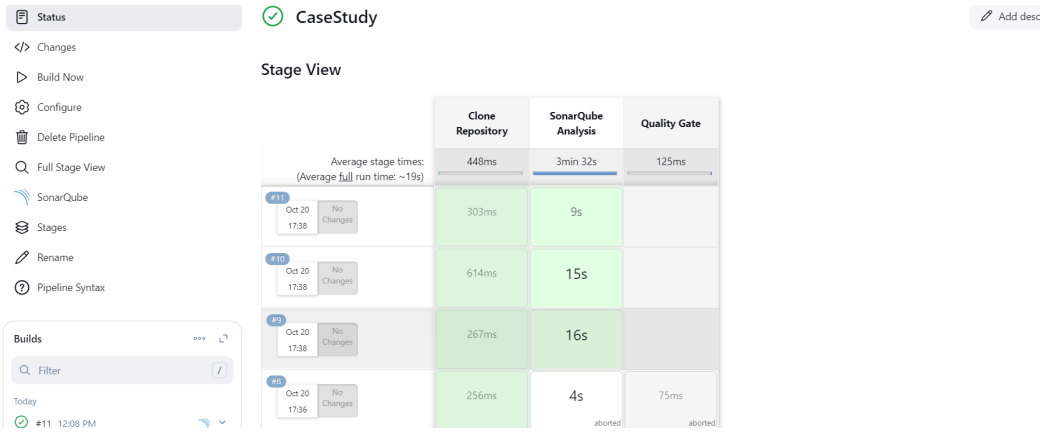
b) Set the Payload URL to: *http://<jenkins url>/github-webhook/*.
c) Choose *application/json* for **Content type**.
d) Select **Just the push event**.
e) Click **Add webhook**

Pipeline code:

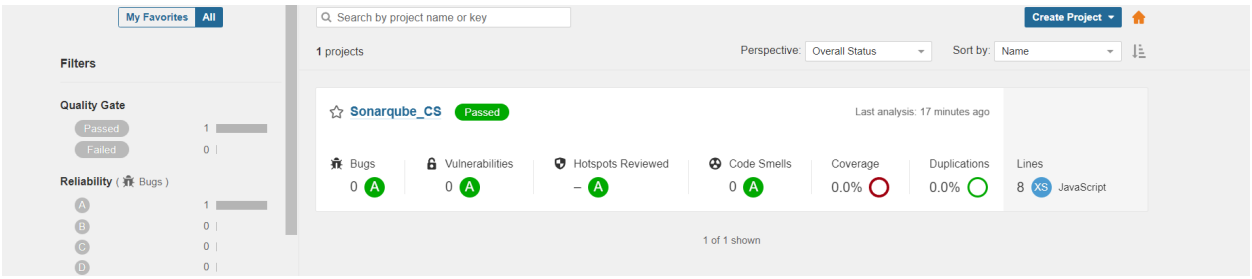
```
pipeline {
    agent any
    triggers {
        githubPush()
    }
    stages {
        stage('Clone Repository') {
            steps {
                git 'https://github.com/Ashloneer/adv-devops-casestudy'
            }
        }
        stage('SonarQube Analysis') {
            environment {
                SONAR_TOKEN = '48e56dcd98b809d4b5b4e90b25167a191efd9eca' // Your actual
token
            }
            steps {
                withSonarQubeEnv('Sonarqube') {
                    sh """
                    ${tool 'Sonarqube'}/bin/sonar-scanner \\
                      -Dsonar.projectKey=Sonarqube_CS \\
                      -Dsonar.sources=. \\
                      -Dsonar.host.url=http://184.72.130.101:9000 \\
                      -Dsonar.login=${SONAR_TOKEN}
                    """
                }
            }
        }
    }
}
```

After adding pipeline : **Save** it and Build project by clicking **Build Now**





Sonarqube:



Guidelines:

- Always update your instance (sudo apt update && sudo apt upgrade).
- Use an instance with storage of at least 4GiB RAM and 2 CPU (t2.medium or higher).

3. Key Points:

Jenkins Automation is the process of automatic builds, where Jenkins pulls the code from the GitHub to execute the builds and integrate changes continuously without any interference of humans.

SonarQube Integration, it is a step where SonarQube is integrated on the static level and analyzes the software at the time of building. Bugs, bugs, vulnerabilities, and code smells have been known to improve the quality of the code.

Rather than local deployment we have used an EC2 instance which is reliable, scalable and flexible.

Practice:

- Run through the demo multiple times to ensure everything works smoothly.
- Confirm that Jenkins and SonarQube are running before starting the presentation.
- Check Public IP each time we start presentation because each time new Public IP is allot to instances and according to that configurations are set on Jenkins
